

# PUZZLE

## UNIT IV: Files, Modules, and Packages

### "The Modular Mystery"

You've encountered a mystery in the world of Python files, modules, and packages. Several files are scattered across different directories, each containing parts of a Python program.

**Objective:** Piece together the program by correctly importing modules and organizing packages. Each file holds a clue that will lead you to the next, but only if the modules are correctly imported and the functions correctly referenced. Can you solve the modular mystery and complete the program?
