UNIT IV: Files, Modules, and Packages

Subtopic 4: Handling Exceptions

2-Mark Questions:

1. What is a custom exception in Python, and why might you create one?
2. Provide an example of how to raise a custom exception in Python.
3. How does the `else` block in Python exception handling differ from the `except` block?
4. Why is it important to handle exceptions in Python programs?
5. How can custom exceptions improve the clarity and robustness of a Python program?
