

UNIT IV: Files, Modules, and Packages

Subtopic 5: Modules and Packages

2-Mark Questions:

1. What is a module in Python, and how is it used?
2. How do you create a custom module in Python?
3. What is the difference between a module and a package in Python?
4. Provide an example of how to import a module in Python.
5. Why are packages important for organizing Python code?
