- **Schedule Crunch**: Your project has a deadline in one week, but a critical feature needs two more weeks. How do you address this challenge?

- **Resource Allocation**: With 5 developers and 10 features, each taking 3 weeks, how do you ensure maximum feature completion in 8 weeks?

- **Scope Creep**: A stakeholder's major change request adds 20% to the project effort. How do you manage this change without disrupting the timeline?

- **Risk Management**: High risk of evolving requirements threatens the project. What strategies do you use to mitigate this risk?

- **Team Issues**: A developer is missing deadlines and claims overload. How do you resolve this issue to boost team productivity?
