SNS COLLEGE OF ENGINEERING

Kurumbapalayam(Po), Coimbatore – 641 107
Accredited by NAAC-UGC with 'A' Grade
Approved by AICTE, Recognized by UGC & Affiliated to Anna University, Chennai

Department of AI &DS

Course Name – 19AD602 DEEP LEARNING

III Year / VI Semester

Unit 3-DIMENSIONALITY REDUCTION
Topic: Introduction to Convnet-VGG

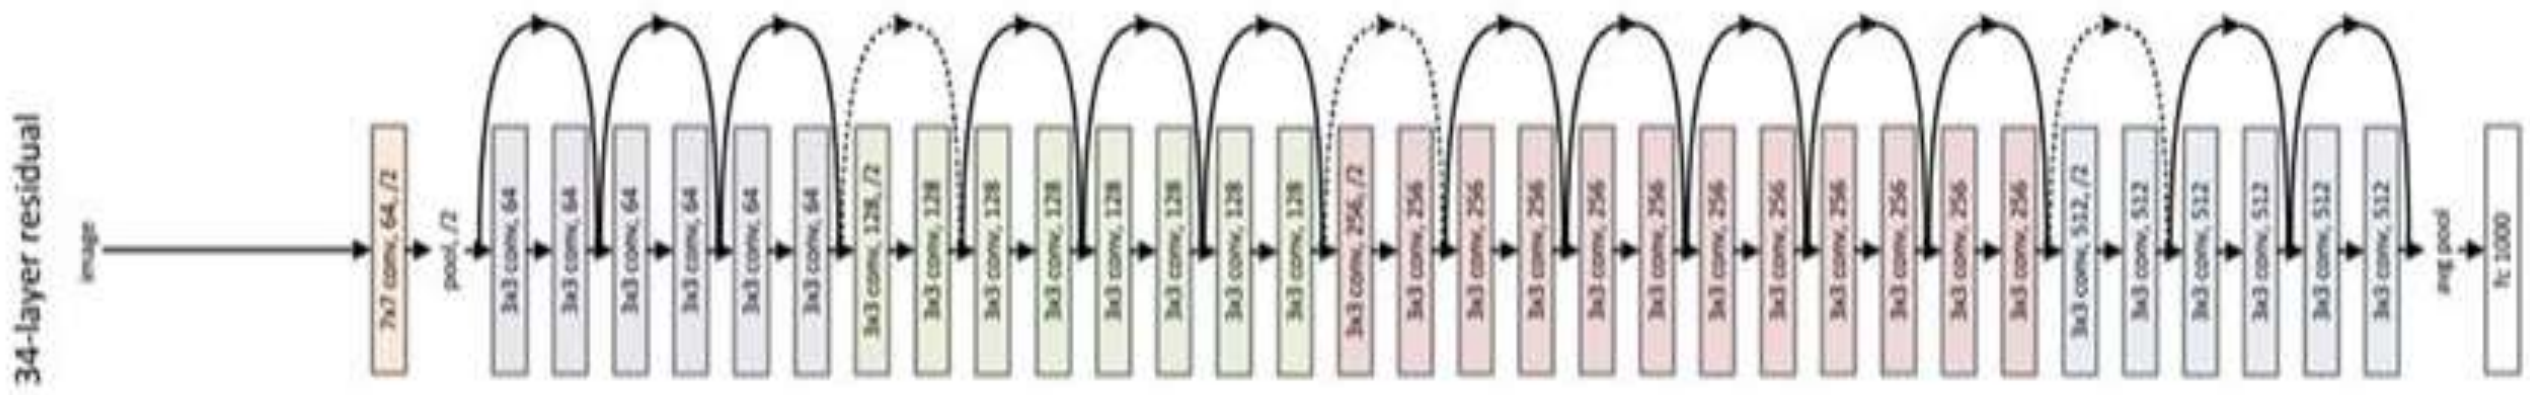
Case Study: Application of VGG in Image Classification

A company uses the **VGG-16 architecture** to develop an advanced image recognition system for e-commerce. The model accurately classifies product images into categories like "electronics," "fashion," and "home goods." Despite being computationally intensive, the simplicity and uniform convolutional layers of VGG enable superior feature extraction, improving the customer shopping experience.

Activity: Fine-Tuning VGG for a Custom Dataset

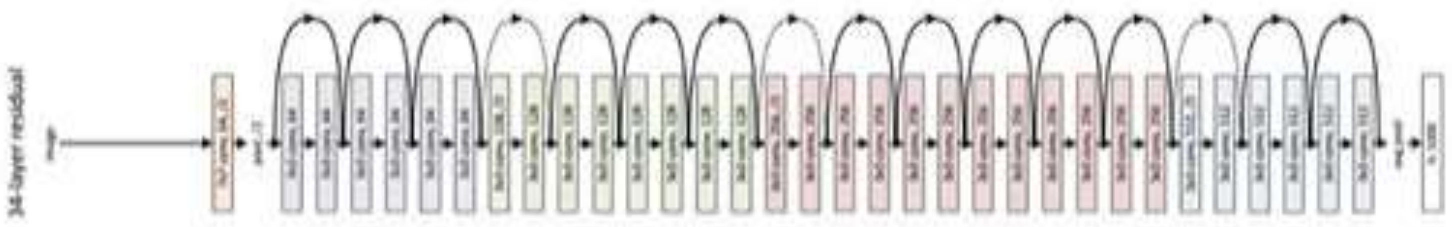
1. **Task:** Fine-tune a pre-trained VGG-16 model for classifying flower species using the "Flowers 102" dataset.
2. **Steps:**
   - Import the pre-trained VGG-16 model without the top fully connected layers.
   - Add a custom classifier head specific to the flower dataset.
   - Train the model, keeping the initial convolutional layers frozen to utilize learned features effectively.
3. **Goal:** Achieve an accuracy of 85% or higher on the test set.

Depth in Neural Network

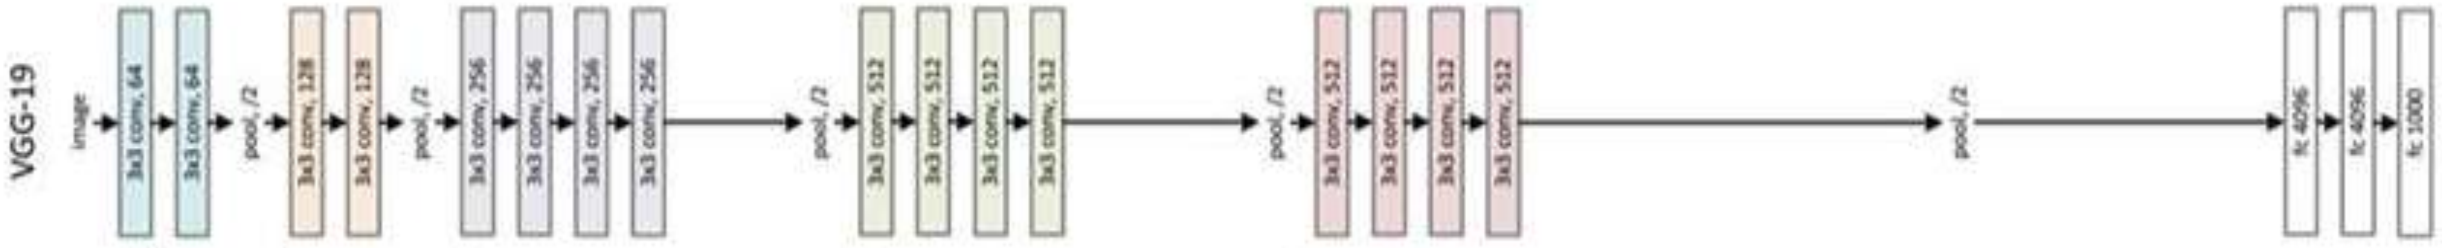


ResNet improved performance by training very deep network at the time (2016)

Depth in Neural Network

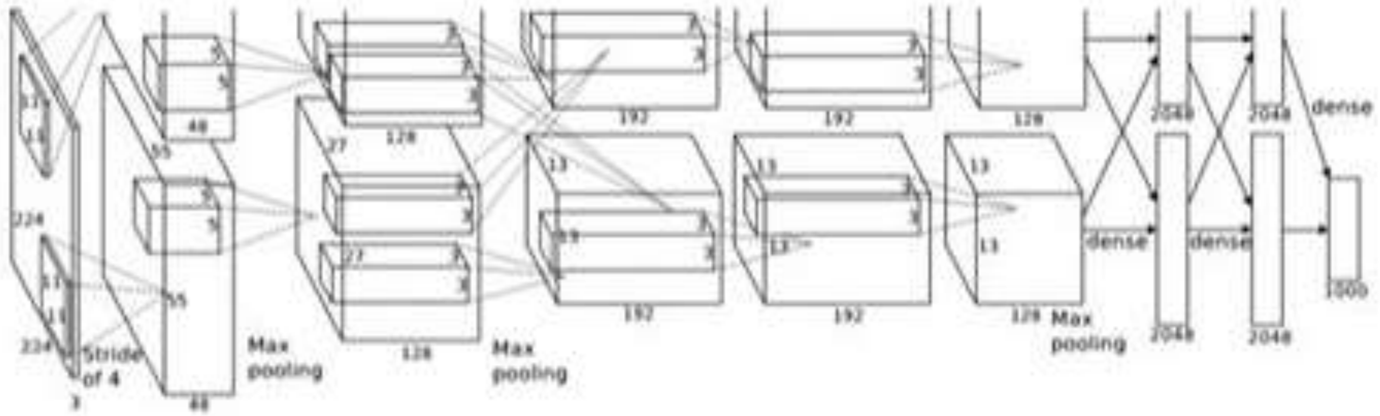


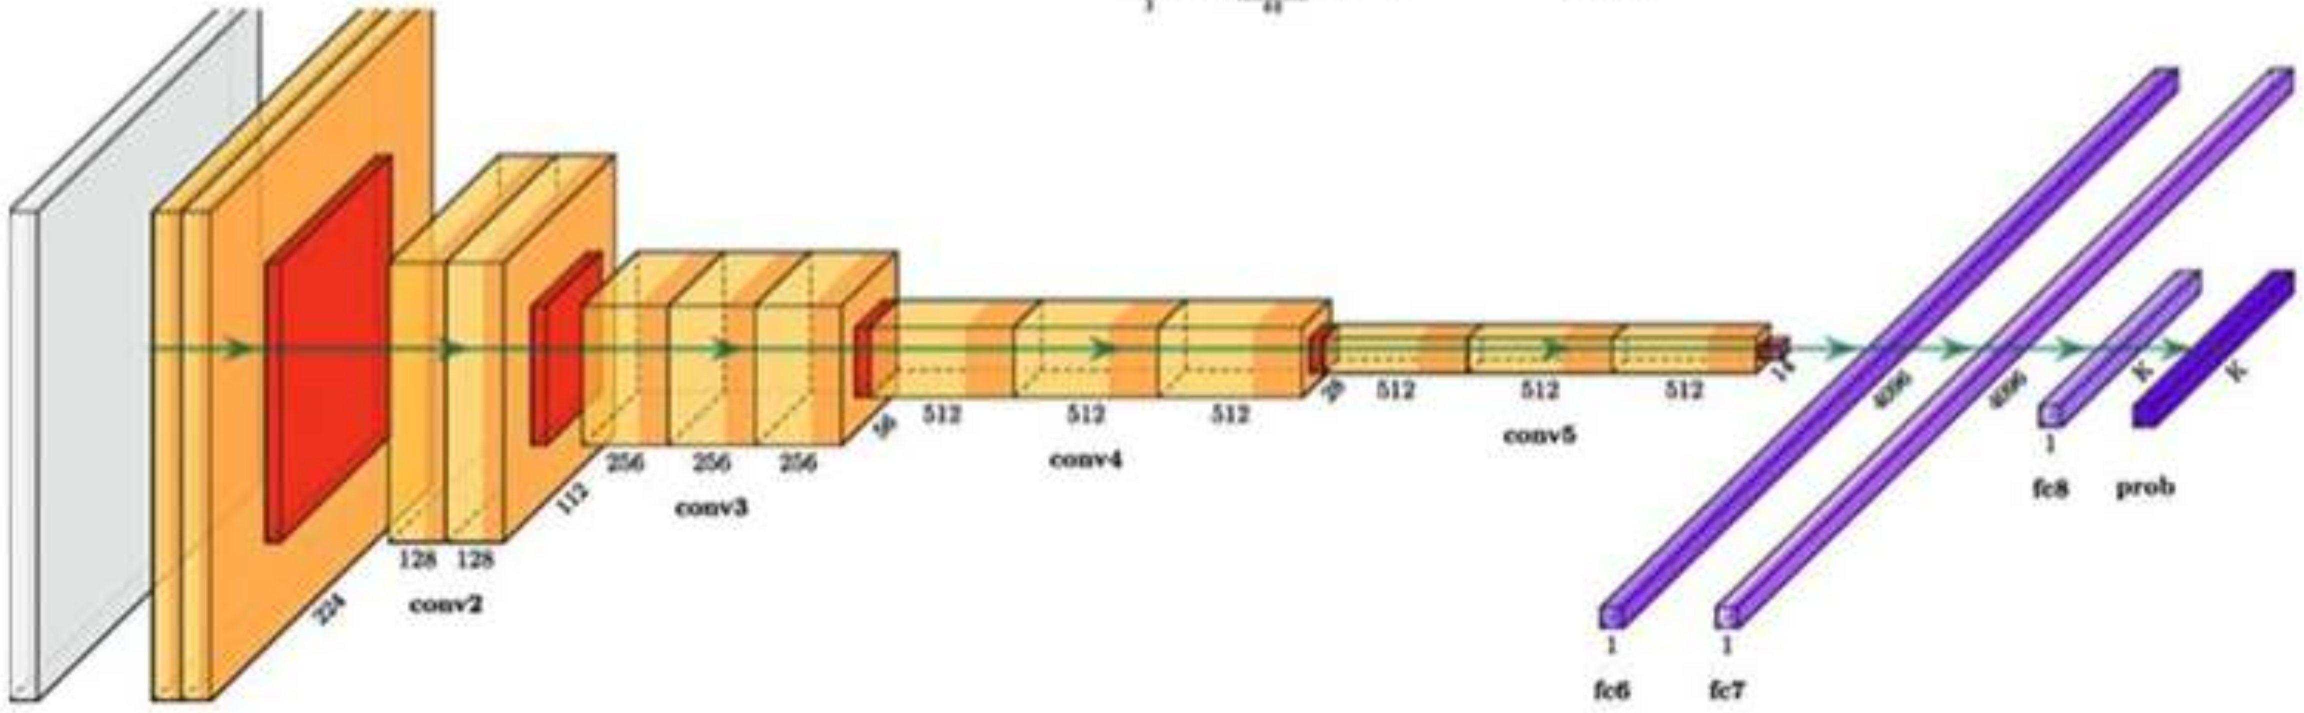
Resnets were inspired by the VGG architecture



Depth in Neural Network

VGG was very deep at the time (compared to AlexNet)

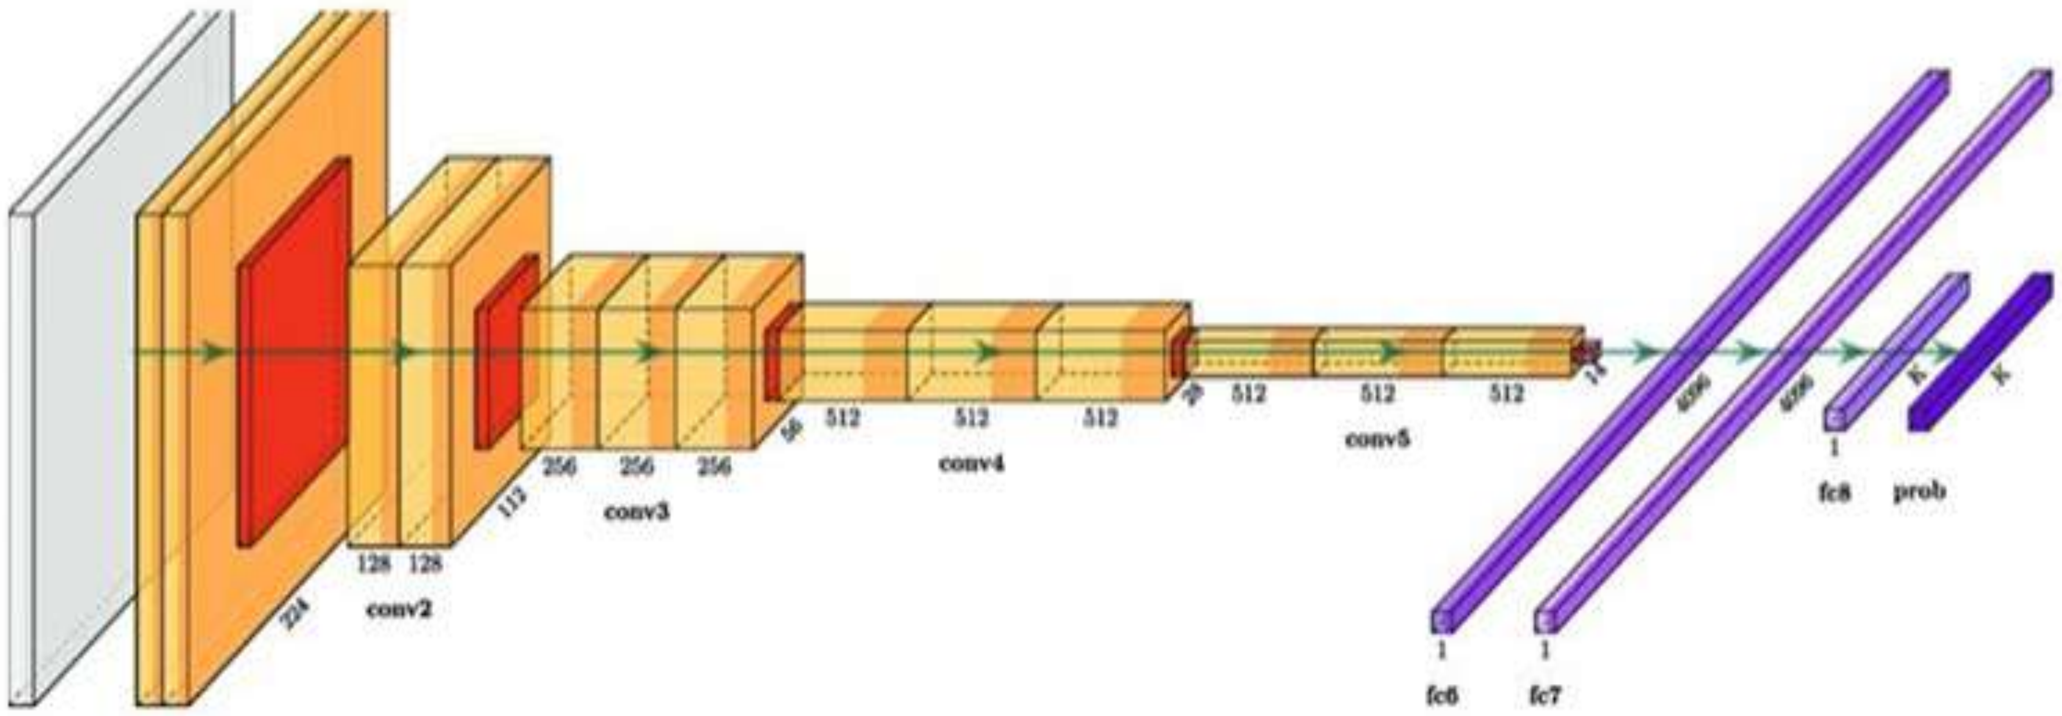




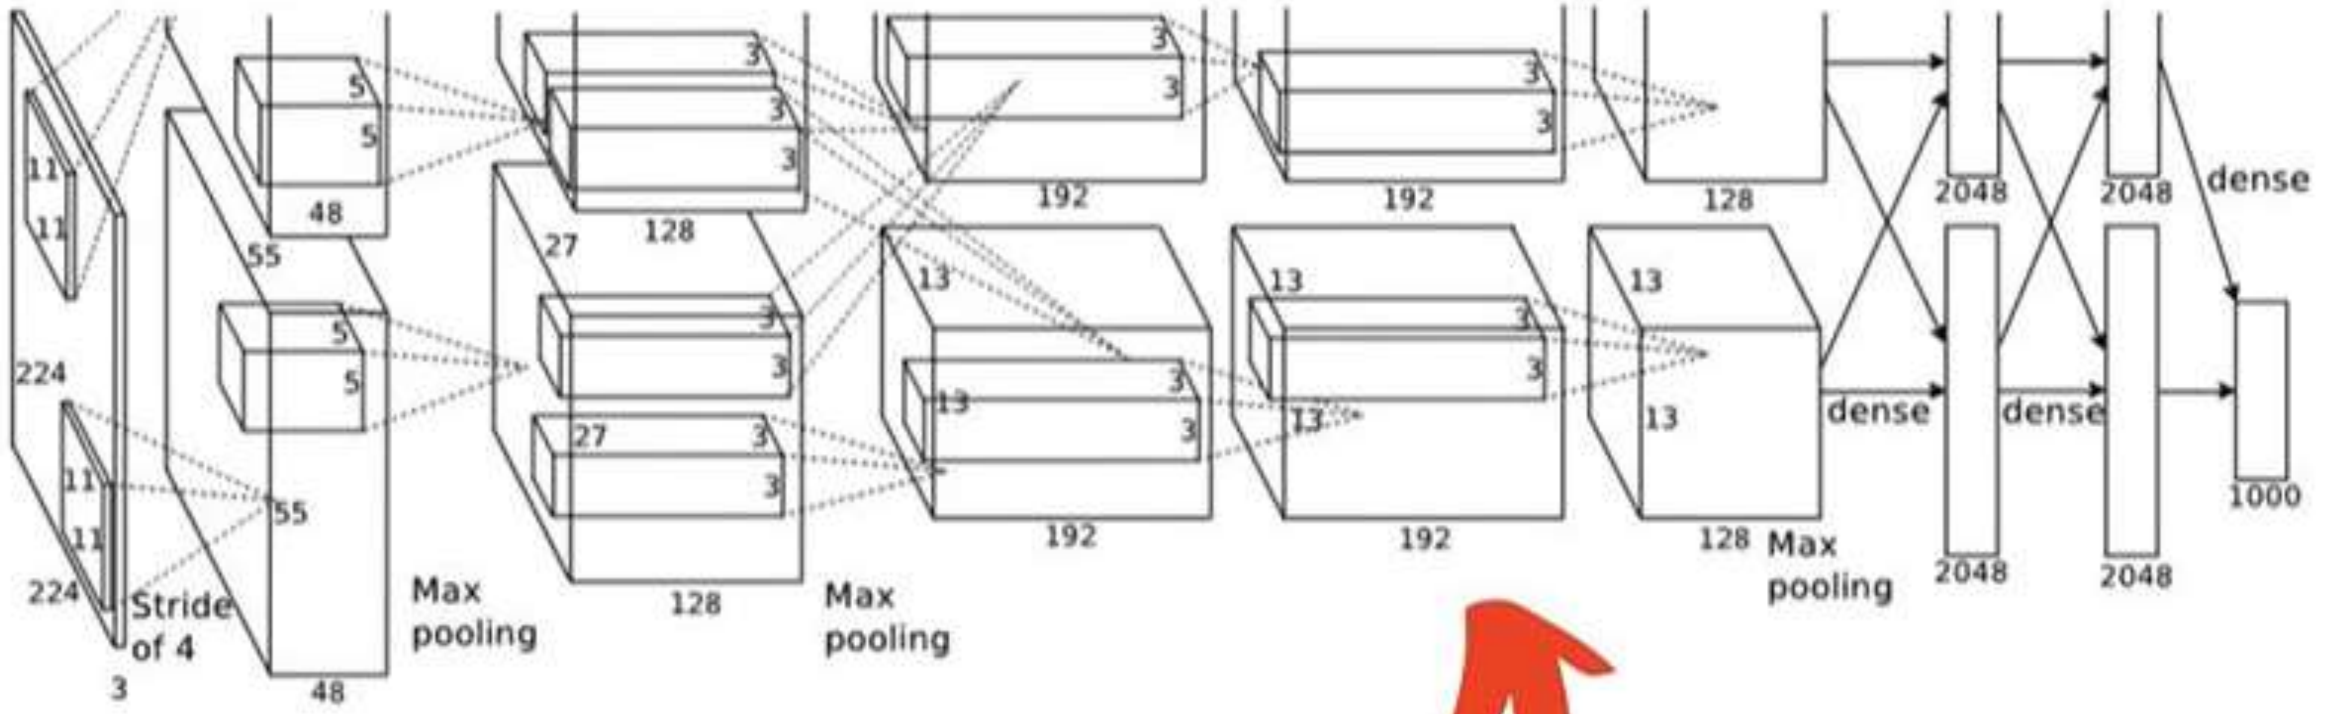
Depth in Neural Network

The main difference from the previous networks is:

- Deeper (16-19 layers)
- Smaller Convolutional Filters (3x3)



VGG Network Architecture

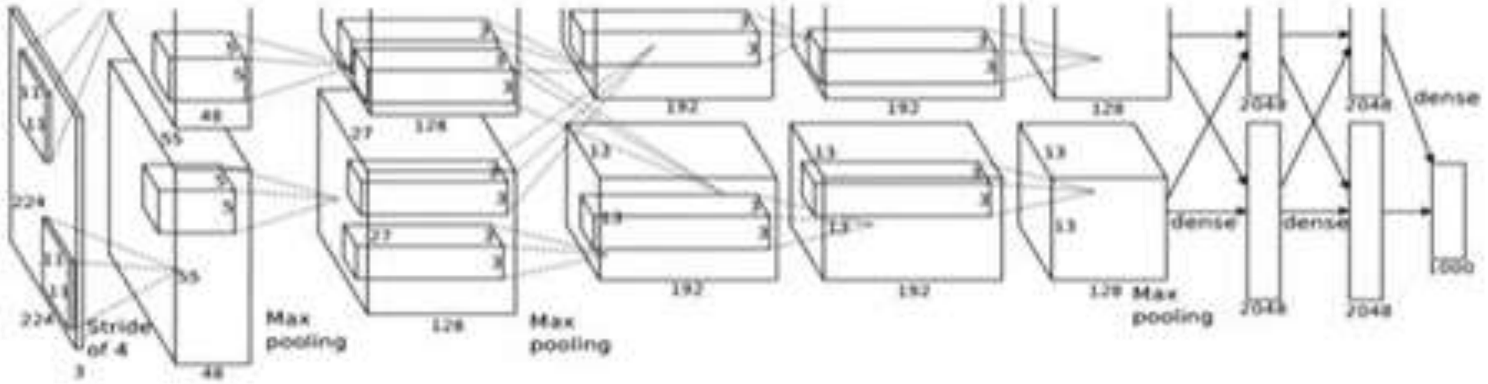


AlexNet looks like this

VGG Network Architecture

Not too deep (5 layers)

Use local response normalization



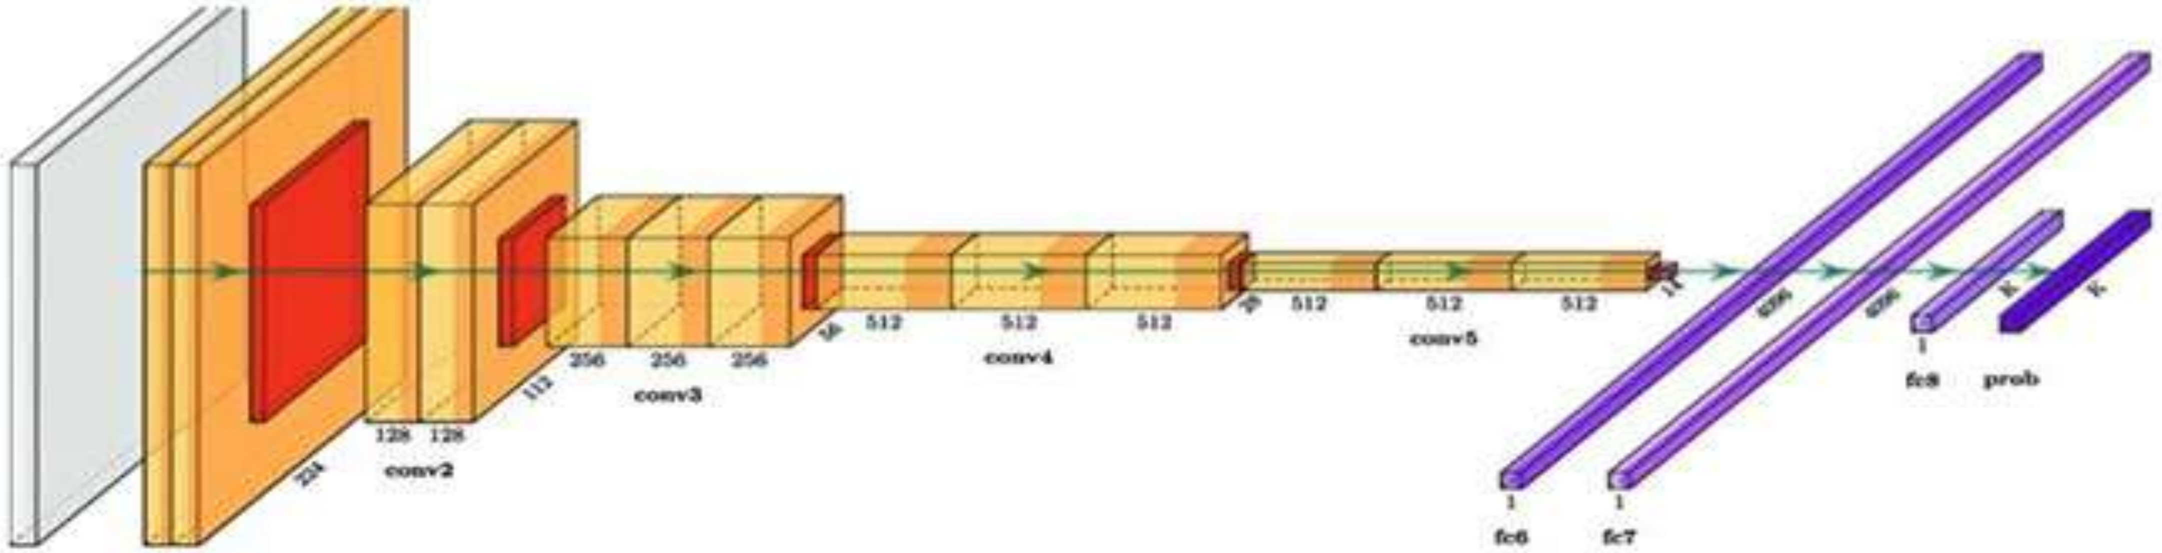
60M parameters

11x11, 5x5 and 3x3 filters

VGG Network Architecture

Overview:

- Input is 224 x 224 RGB image
- Conv layers 3x3 (also 1x1 sometime*)
- Max Pooling (2x2 with stride 2) at a few spots
- Fully connected layers at the end
- ReLU activation units
- Local Response Normalization not



VGG Network Architecture

Input layer all the same all config.

ConvNet Configuration					
A	A-LRN	B	C	D	E
11 weight layers	11 weight layers	13 weight layers	16 weight layers	16 weight layers	19 weight layers
input (224 × 224 RGB image)

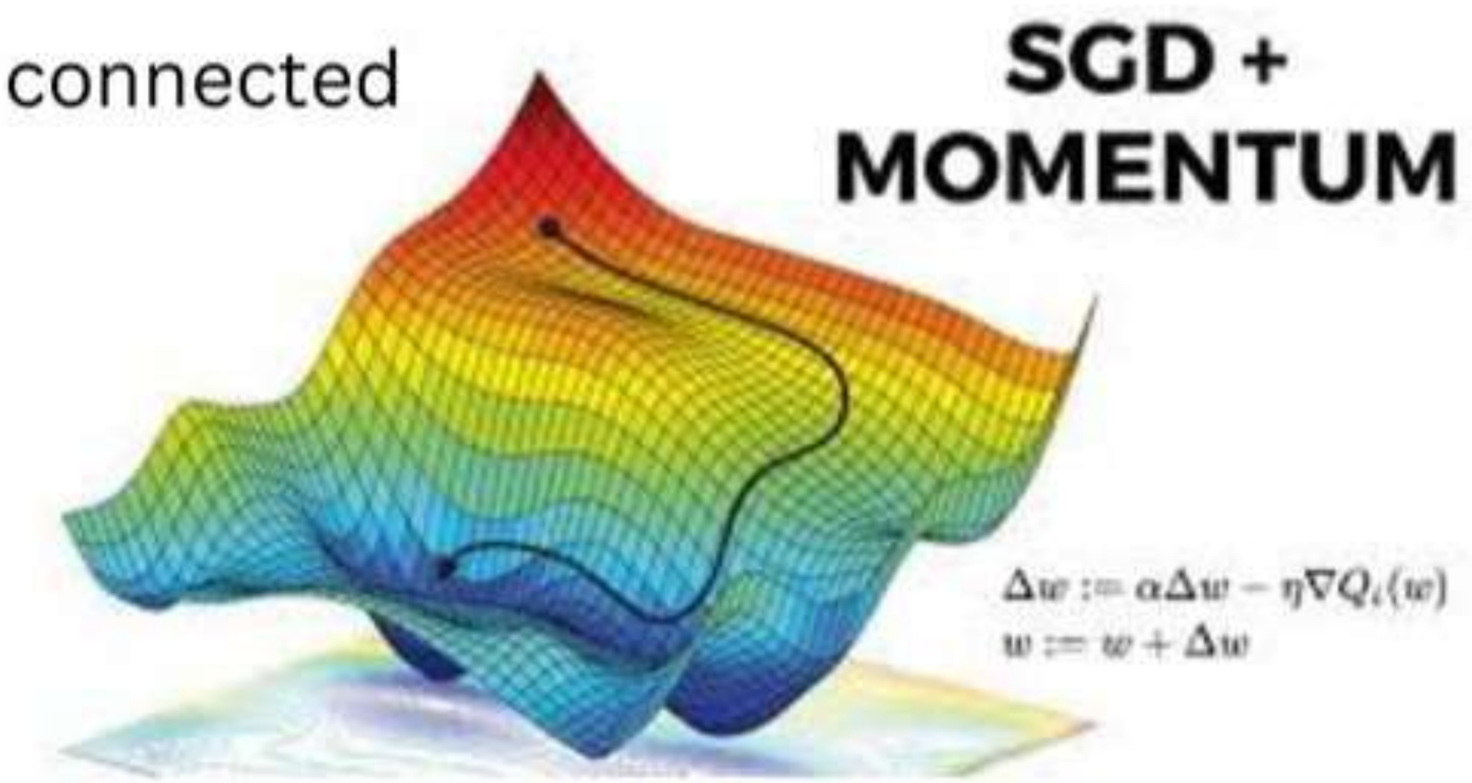
}
```

Introduction to Convnet-VGG

VGG Network Training

Training Overview:

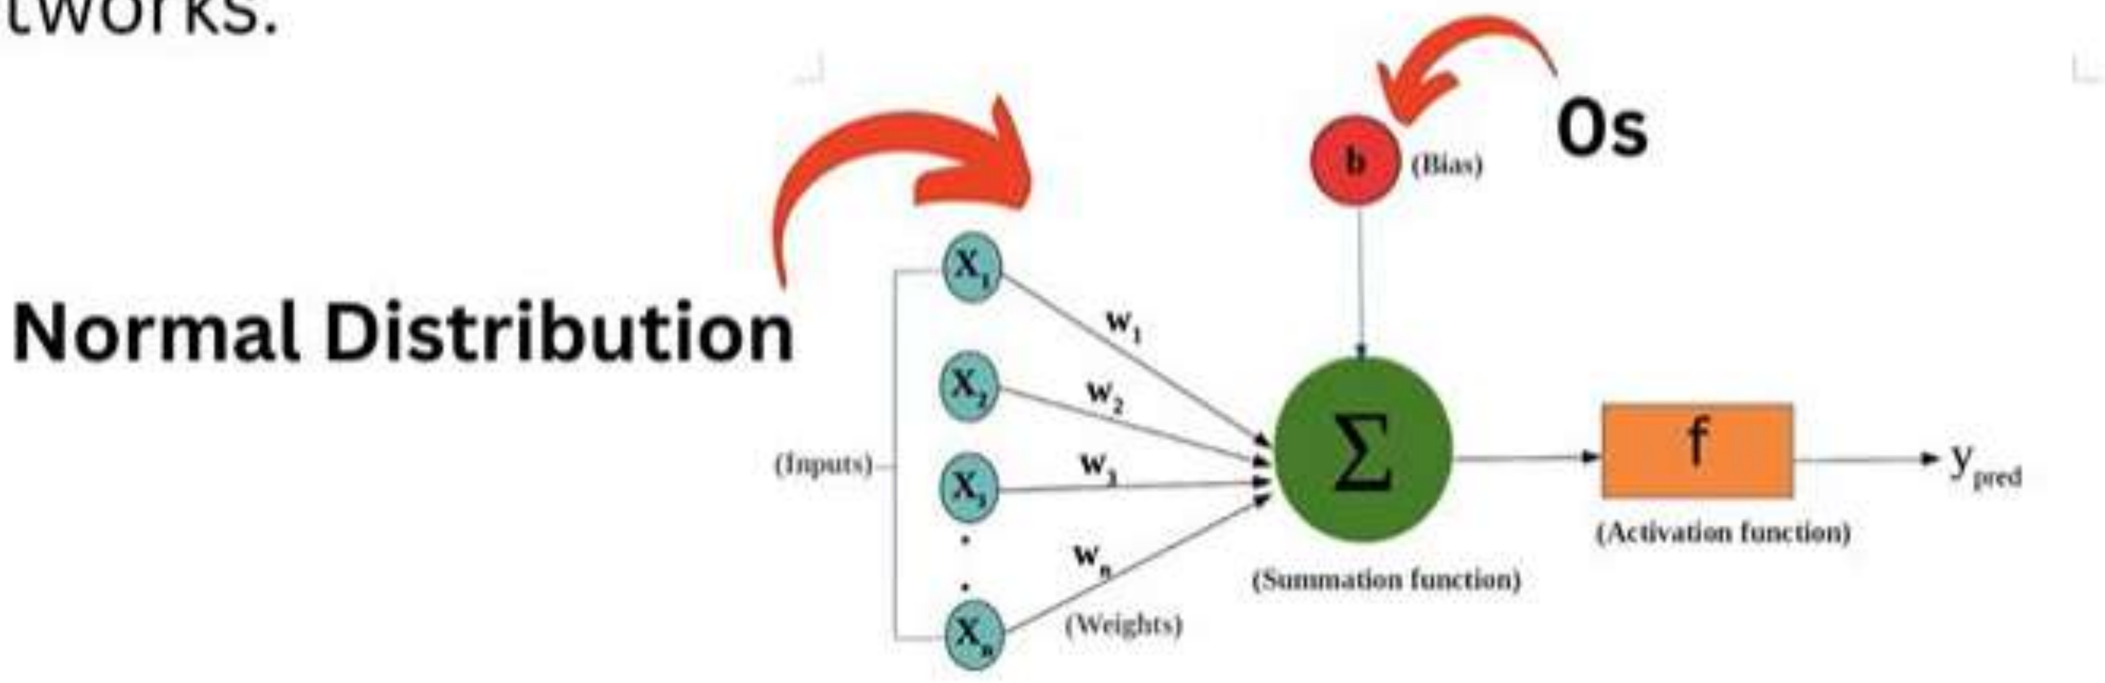
1. batch gradient descent + momentum
2. L2 penalty
3. Drop out at 0.5 for fully connected layers.



VGG Network Training

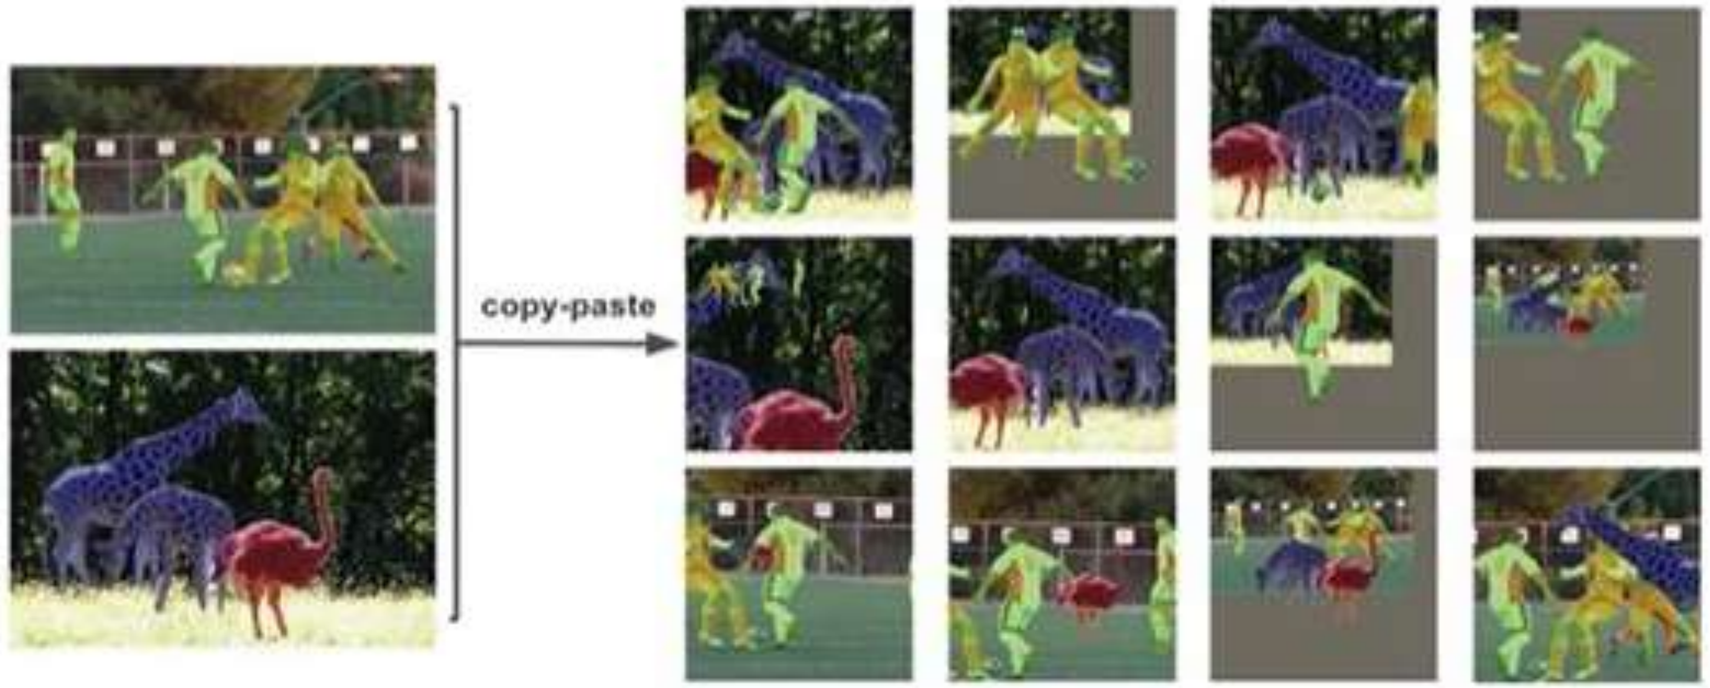
Initialization Overview:

1. Randomly initialized config A.
2. Used trained config A as the base for deeper networks.



VGG Network Training

Data Augmented with Scale Jittering aka Copy-Pasting



VGG Network Results
