

Database Crossword Puzzle

ACROSS

- 1 A condition in which different versions of the same data yield different (inconsistent) results.
- 3 An alphabetic or numeric character or group of characters that defines a characteristic of a person, place, or thing.
- 5 A collection of related (logically connected) fields.
- 7 A condition in which a data environment contains redundant (unnecessarily duplicated) data.
- 10 Data about data; that is, data about data characteristics and relationships.

DOWN

- 2 The result of processing raw data to reveal its meaning. Information consists of transformed data and facilitates decision making.
- 4 In a relational database, a condition in which the data in the database comply with all entity and referential integrity constraints.
- 6 A question or task asked by an end user of a database in the form of SQL code.
- 8 The collection of programs that manages the database structure and controls access to the data stored in the database.
- 9 Raw facts, or facts that have not yet been processed to reveal their meaning to the end user.
