AP/IT

Lists

Three types of lists supported by HTML:

- *Unordered*: A bullet list
- *Ordered*: A numbered list
- *Definition*: A list of terms and definitions for each

All three elements are **block elements**, so a list by default begins on a new line when displayed in the browser.

Lists: Example

```
<ul>
  <li>Bulleted list item</li>
  <li>Bulleted list item 2</li>
</ul>
<ol>
  <li>Numbered list item</li>
  <li>Numbered list item 2</li>
</ol>
<dl>
  <dt>Term</dt>
    <dd>Definition of term</dd>
  <dt>Term 2</dt>
    <dd>Definition of term 2</dd>
</dl>
```

List elements

dd	definition
dl	definition list
dt	term
li	list item (for ul and ol)
ol	ordered list
ul	unordered list

Browser rendering the three HTML list types.

Screenshot of a Mozilla Firefox browser window titled "Lists.html - Mozilla...". The page displays three types of lists:

- Bulleted list item
- Bulleted list item 2

1. Numbered list item
2. Numbered list item 2

Term
 Definition of term

Term 2
 Definition of term 2

Nested List

- Lists can be nested to produce an outline layout

 Bulleted list item

 Nested list item

 Nested list item 2

 Bulleted list item 2

Nested unordered lists

The format of the bullets in this display (or the type of numbers used, if this was an ordered list) can be defined using style sheets.

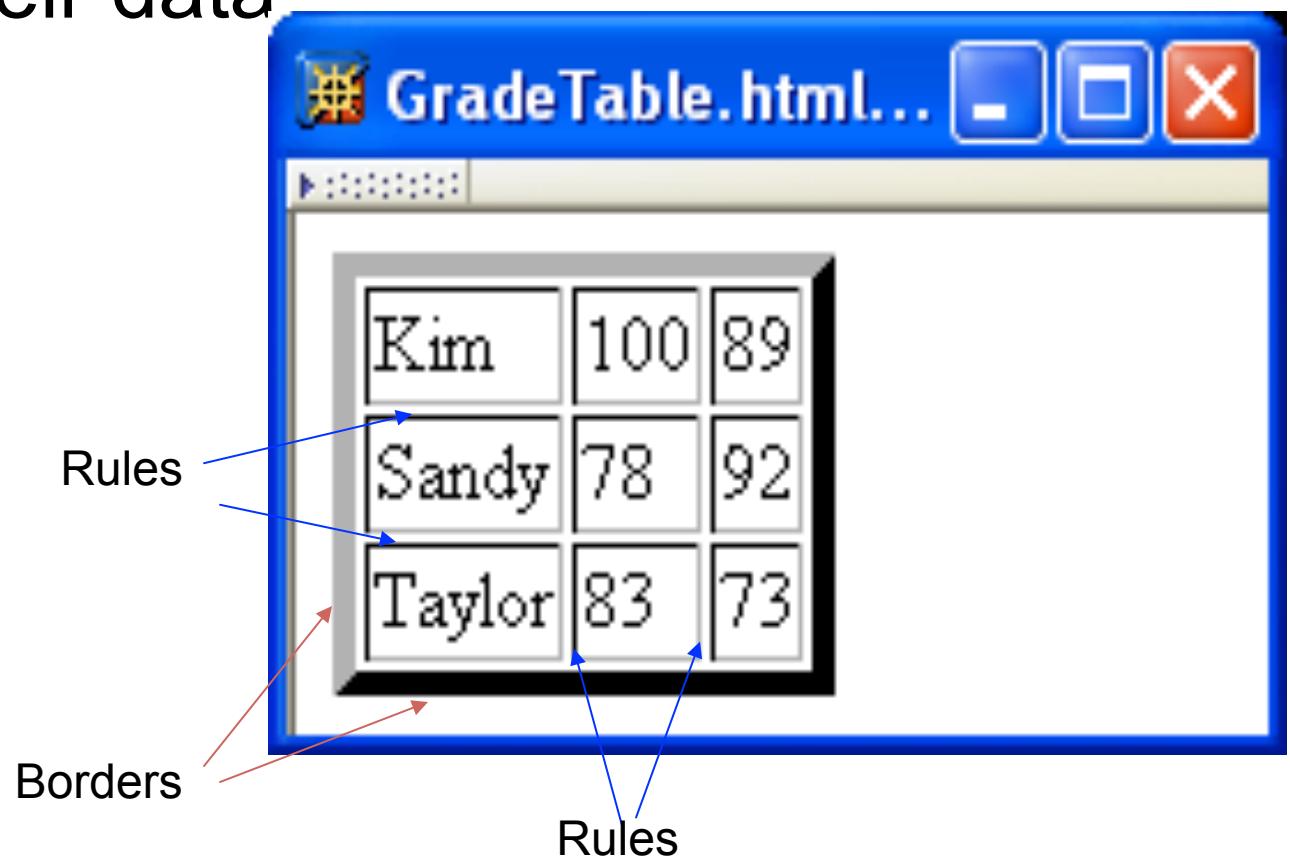

Tables

table →

row	Menu item	header cell	Calories	header cell	Fat (g)	header cell
row	Chicken Soup	data cell	120	data cell	2	data cell
row	Caesar Salad	data cell	400	data cell	26	data cell

Tables

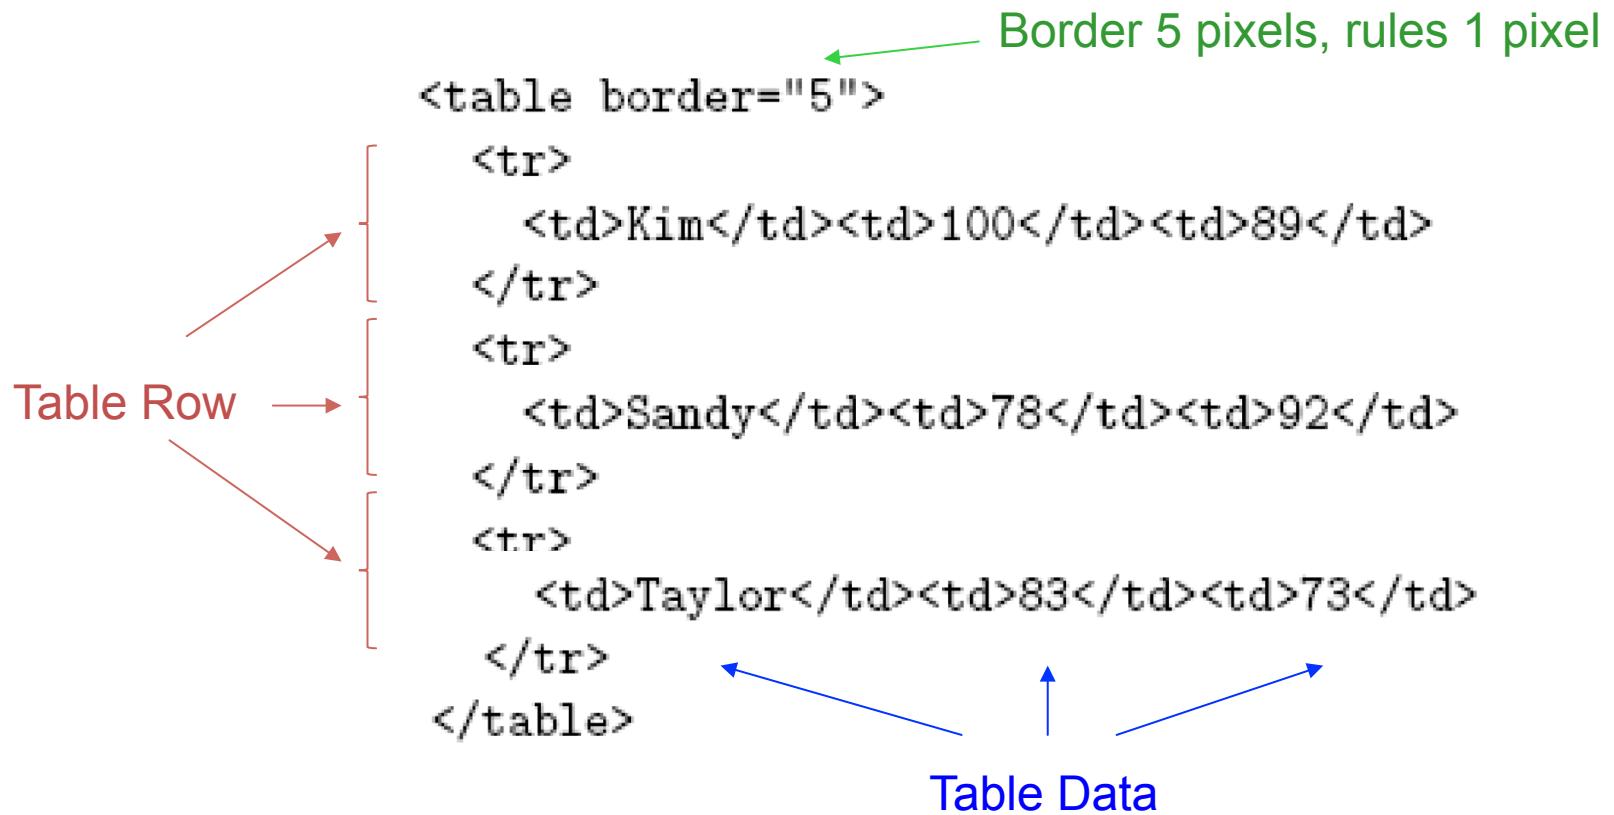

- Presenting data in tabular form
- Columns and rows will automatically size to contain their data

Tables

- Various options for changing the visual appearance of a table, such as the widths of its internal cell-separating lines (*rules*) and external borders available using style sheets

The diagram shows the HTML code for a table with three rows and three columns. A red bracket on the left groups the entire row structure (<tr> and </tr>) under the label "Table Row". A green arrow points from the text "Border 5 pixels, rules 1 pixel" to the attribute "border='5'". A blue bracket at the bottom groups the data cells (<td> tags) under the label "Table Data".

```
<table border="5">
  <tr>
    <td>Kim</td><td>100</td><td>89</td>
  </tr>
  <tr>
    <td>Sandy</td><td>78</td><td>92</td>
  </tr>
  <tr>
    <td>Taylor</td><td>83</td><td>73</td>
  </tr>
</table>
```

Table Row → {

Border 5 pixels, rules 1 pixel

Table Data ↑ ↓

Table Elements

<table>...</table>

Tabular content (rows and columns)

<tr>...</tr>

Table row

<th>...</th>

Table header

<td>...</td>

Table cell data

Table Caption and headers

```
<table border="5">
  <caption>
    COSC 400 Student Grades
  </caption>
  <tr>
    <td>&nbsp;</td><td>&nbsp;</td><th colspan="2">Grades</th>
  </tr>
  <tr>
    <td>&nbsp;</td><th>Student</th><th>Exam 1</th><th>Exam 2</th>
  </tr>
  <tr>
    <th rowspan="2">Undergraduates</th><td>Kim</td><td>100</td><td>89</td>
  </tr>
  <tr>
    <td>Sandy</td><td>78</td><td>92</td>
  </tr>
  <tr>
    <th>Graduates</th><td>Taylor</td><td>83</td><td>73</td>
  </tr>
</table>
```

Table with heading and caption

GradeTableHdr.html - Mozilla

COSC 400 Student Grades

		Grades	
	Student	Exam 1	Exam 2
Undergraduates	Kim	100	89
	Sandy	78	92
Graduates	Taylor	83	73

Table Caption and headers

- <td> </td> to indicate the column should be left blank
- non-breaking space

HTML Character Entities

Result	Description	Entity Name
	non-breaking space	
<	less than	<
>	greater than	>
&	ampersand	&
"	double quotation mark	"
'	single quotation mark (apostrophe)	'
¢	cent	¢
£	pound	£
¥	yen	¥
€	euro	€
©	copyright	©
®	registered trademark	®

Cellspacing and Cellpadding

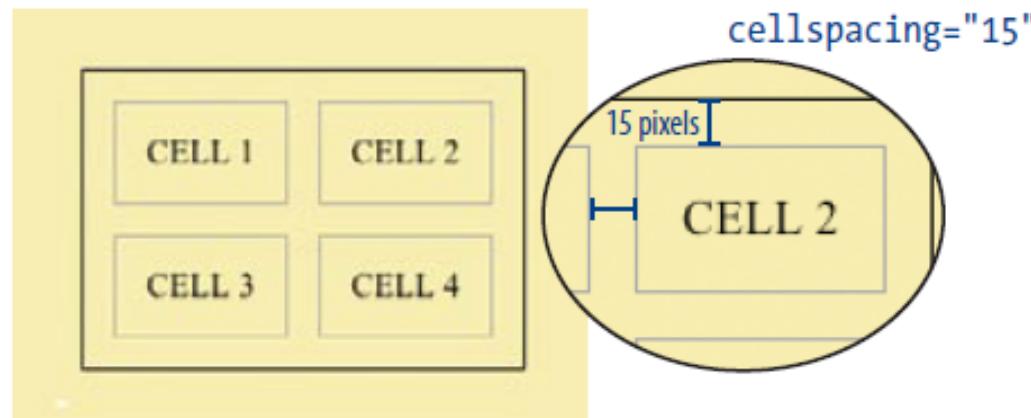

- **table** element has two attributes that control spacing within the table:
***cellspacing* and *cellpadding*.**

Tables: Cell spacing

Cell spacing is the amount of space between two adjacent cells, or between a side of the cell and the border of the table, specified in number of pixels

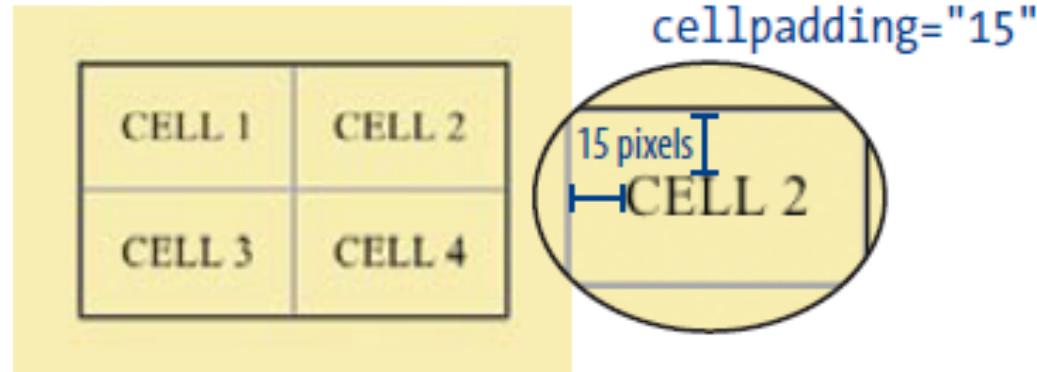

Cell spacing adds space between cells

Tables: Cell padding

Cell padding is the amount of space between the contents of the cell and the cell border

Cell padding adds space between the edge of the cell and its contents.

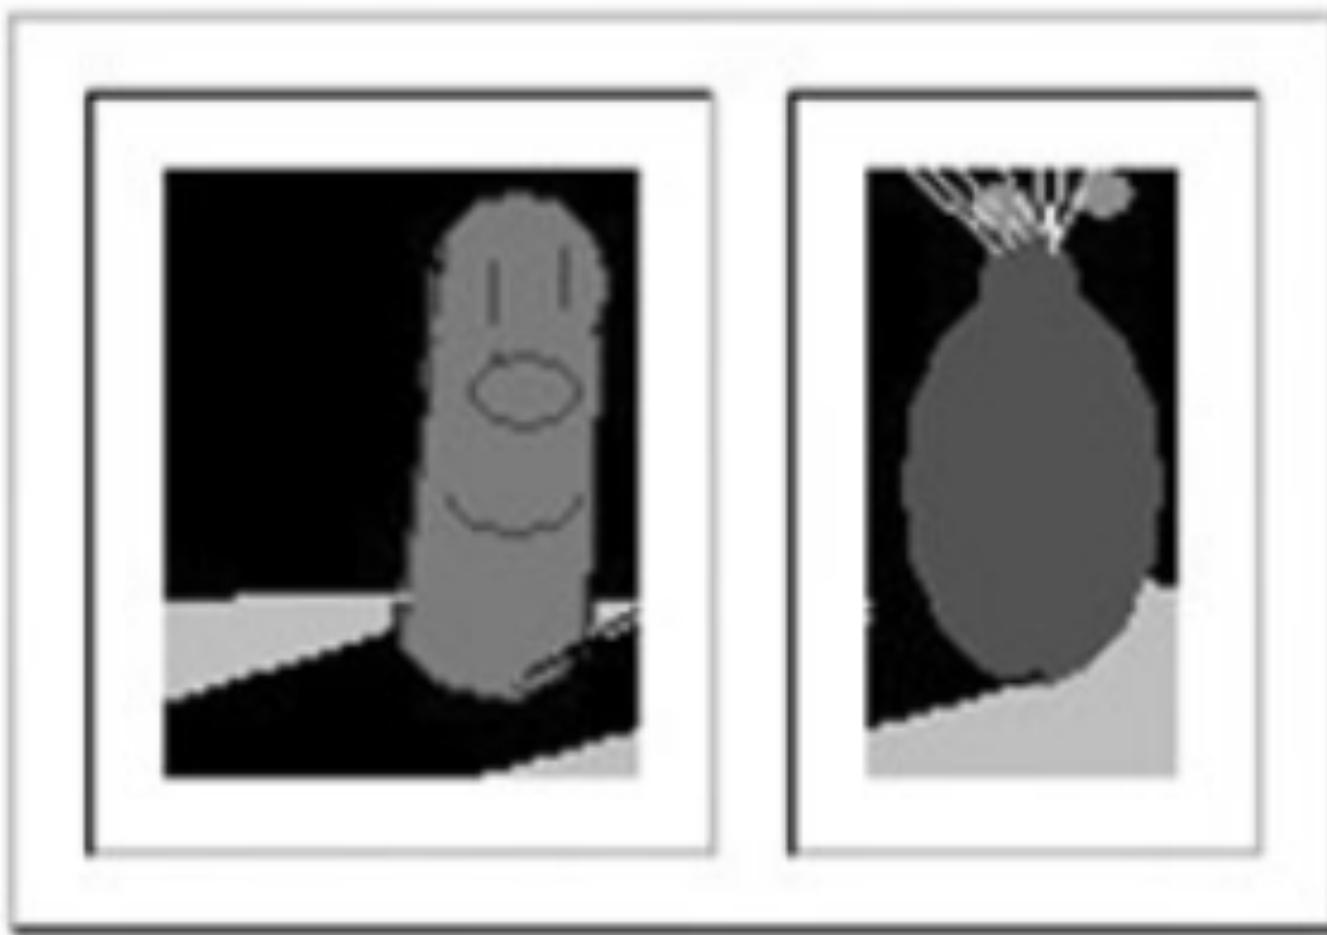

Example

```
<table border="1" cellspacing="10" cellpadding="10">
  <tr>
    <td>
      
    </td>
    <td> 
    </td>
  </tr>
</table>
```

Effects of cellpadding and cellspacing attributes

display:block

- images are considered ***inline HTML elements***, the ***style attribute*** specification given overrides this default behavior by indicating that the image should be treated as a block element for display purposes.

Frames

- HTML frames are essentially a means of having several browser windows open within a single larger window.
- Such a window is created by using one or more *frameset elements* after the heading element
- The document type declaration is also different for framed pages

Frames

```
<!DOCTYPE html
PUBLIC "-//W3C//DTD XHTML 1.0 Frameset//EN"
"http://www.w3.org/TR/xhtml1/DTD/xhtml1-frameset.dtd">
<html xmlns="http://www.w3.org/1999/xhtml">
<head>
    <title>Java 2 Platform SE v1.4.2</title>
</head>
<frameset cols="20%, 80%">
    <frameset rows="1*, 2*>
        <frame src="overview-frame.html"
            id="upperLeftFrame" name="upperLeftFrame"></frame>
        <frame src="allclasses-frame.html"
            id="lowerLeftFrame" name="lowerLeftFrame"></frame>
    </frameset>
    <frame src="overview-summary.html"
            id="rightFrame" name="rightFrame"></frame>
</frameset>
</html>
```

Frames

- This top-level frameset element contains two child elements: another ***frameset*** and a ***frame***
- ***id*** is the attribute used for naming frames in XHTML, and ***name*** in HTML 4.01
- In ***frameset elements***, ***frame elements*** are required
- Each ***frame*** is essentially a browser window.
- The ***src attribute*** of a frame tells the browser the URL of a document to be loaded into the frame initially.

Frames

- Hyperlink in one frame can load document in another:

```
<a href="java/applet/package-frame.html"  
target ="lowerLeftFrame">
```

- Value of target attribute specification is id/ name of a frame

Frames

Advantage:

- Easy means of writing HTML documents that provide navigation tools.
- That is, one page (a navigation page) can be written that contains a number of links and a second frame can be specified as a target

Disadvantage:

- Avoid using frames which can cause confusion for end users while clicking the browser's Print button.
- If the document is displayed on a cell phone it won't accommodate good enough.

Frames are still used for certain specialized technical applications—such as documents produced using the Javadoc™ documentation system

Forms

LifeStory.html - Mozilla

Enter your name:

Give your life's story in 100 words or less:

Check all that apply to you: tall funny smart

An HTML *form* is used to allow a user to input data on a web page

Forms

Each form is content of a form element

```
<form action="http://www.example.org" method="get">  
  <div>  
    <label>  
      Enter your name: <input type="text" name="username" size="40"/>  
    </label>  
    <br/>  
    <label>  
      Give your life's story in 100 words or less:  
    <br/>  
    <textarea name="lifestory" rows="5" cols="60"></textarea>  
  </label>
```

Forms

action specifies URL where form data is sent in an HTTP request

```
<form action="http://www.example.org" method="get">  
  <div>  
    <label>  
      Enter your name: <input type="text" name="username" size="40"/>  
    </label>  
    <br/>  
    <label>  
      Give your life's story in 100 words or less:  
    <br/>  
    <textarea name="lifestory" rows="5" cols="60"></textarea>  
  </label>
```

Forms

HTTP request method (lowercase)

```
<form action="http://www.example.org" method="get">  
  <div>  
    <label>  
      Enter your name: <input type="text" name="username" size="40"/>  
    </label>  
    <br/>  
    <label>  
      Give your life's story in 100 words or less:  
    <br/>  
    <textarea name="lifestory" rows="5" cols="60"></textarea>  
  </label>
```

Forms: div

```
<form action="http://www.example.org" method="get">  
  <div>  div is the block element analog of span (no-style block element)  
  <label>  
    Enter your name: <input type="text" name="username" size="40"/>  
  </label>  
  <br/>  
  <label>  
    Give your life's story in 100 words or less:  
  <br/>  
  <textarea name="lifestory" rows="5" cols="60"></textarea>  
  </label>
```

Form control elements must be content of a block element

Forms: text line

LifeStory.html - Mozilla

Enter your name:

Give your life's story in 100 words or less:

Check all that apply to you: tall funny smart

Forms: text line

```
<form action="http://www.example.org" method="get">  
  <div>  
    <label>          Single-line text field  
      Enter your name: <input type="text" name="username" size="40"/>  
    </label>  
    <br/>  
    <label>  
      Give your life's story in 100 words or less:  
    <br/>  
    <textarea name="lifestory" rows="5" cols="60"></textarea>  
  </label>
```

label – creates a caption for form controls

Forms: text line

```
<form action="http://www.example.org" method="get">  
  <div>  
    <label>  
      Enter your name: <input type="text" name="username" size="40"/>  
    </label>  
    <br/>  
    <label>  
      Give your life's story in 100 words or less:  
      <br/>  
      <textarea name="lifestory" rows="5" cols="60"></textarea>  
    </label>
```

The **name** attribute provides the variable name for the control.

name associated with this control's data in HTTP request

Forms: text line

```
<form action="http://www.example.org" method="get">  
  <div>  
    <label> Width (number of characters) of text field  
      Enter your name: <input type="text" name="username" size="40"/>  
    </label>

 <input type="radio" name="radgroup1" value=">50"/>

 over \$50,000

</label>

Represents string: >50

Forms: drop-down menu

IncomeSelect.html - Mozilla

Your annual income is (select one):

Between \$10,000 and \$50,000

Less than \$10,000

Between \$10,000 and \$50,000

Over \$50,000

} Menu

Forms: drop-down menu

Your annual income is (select one):

```
<select name="income">    Menu control; name given once  
    <option value="0-10"> Less than $10,000 </option>  
    <option value="10-50" selected="selected">  
        Between $10,000 and $50,000  
    </option>  
    <option value=">50"/>over $50,000 </option>  
</select>
```

Forms: drop-down menu

Your annual income is (select one):

```
<select name="income">    Each menu item has its own value
    <option value="0-10"> Less than $10,000 </option>
    <option value="10-50" selected="selected">
        Between $10,000 and $50,000
    </option>
    <option value=">50"/>over $50,000 </option>
</select>
```

Forms: drop-down menu

Your annual income is (select one):

```
<select name="income">
    <option value="0-10"> Less than $10,000 </option>
    <option value="10-50" selected="selected">Item initially displayed in menu
        Between $10,000 and $50,000 control
    </option>
    <option value=">50"/>over $50,000 </option>
</select>
```

Forms: other controls

- Other form controls:
 - Fieldset (grouping)
 - Password
 - Clickable image
 - Non-submit buttons
 - Hidden (embed data)
 - File upload
 - Hierarchical menu

The screenshot shows a Mozilla browser window titled "MoreControls.html - Mozilla" displaying examples of various HTML form controls:

- Example of a fieldset
- input type=password:
- input type=image: (Valid XHTML 1.0)
- input type=button:
- input type=hidden:
- input type=file:
- button type=button: (Valid XHTML 1.0)
- Hierarchical menu
- select withoptgroup
 - Make a selection
 - Group1
 - 1.1
 - 1.2
 - Group2
 - 2.1
 - 2.2

HTML <fieldset> Tag

```
<form>
  <fieldset>
    <legend>Personal:</legend>
    Name: <input type="text"><br>
    Email: <input type="text"><br>
    Date of birth: <input type="text">
  </fieldset>
</form>
```

- The `<fieldset>` tag is used to group related elements in a form.
- The `<fieldset>` tag draws a box around the related elements.
- The `<legend>` tag defines a caption for the `<fieldset>` element.

Forms: other controls

TABLE 2.5: HTML 4.01/XHTML 1.0 non-deprecated form controls.

Element	type Attribute	Control
input	text	Text input
input	password	Password input
input	checkbox	Checkbox
input	radio	Radio button
input	submit	Submit button
input	image	Graphical submit button
input	reset	Reset button (form clear)
input	button	Push button (for use with scripts)
input	hidden	Non-displayed control (stores server-supplied information)
input	file	File select
button	submit	Submit button with content (not an empty element)
button	reset	Cancel button with content (not an empty element)
button	button	Button with content but no predefined action
select	N/A	Menu
option	N/A	Menu item
optgroup	N/A	Heading in a hierarchical menu
textarea	N/A	Multi-line text input
label	N/A	Associate label with control(s)
fieldset	N/A	Groups controls
legend	N/A	Add caption to a fieldset

Thank You
