**An Autonomous Institution**

Accredited by NAAC-UGC with 'A' Grade

Approved by AICTE, Recognized by UGC & Affiliated to Anna  
University, Chennai

## DEPARTMENT OF COMPUTER SCIENCE AND TECHNOLOGY

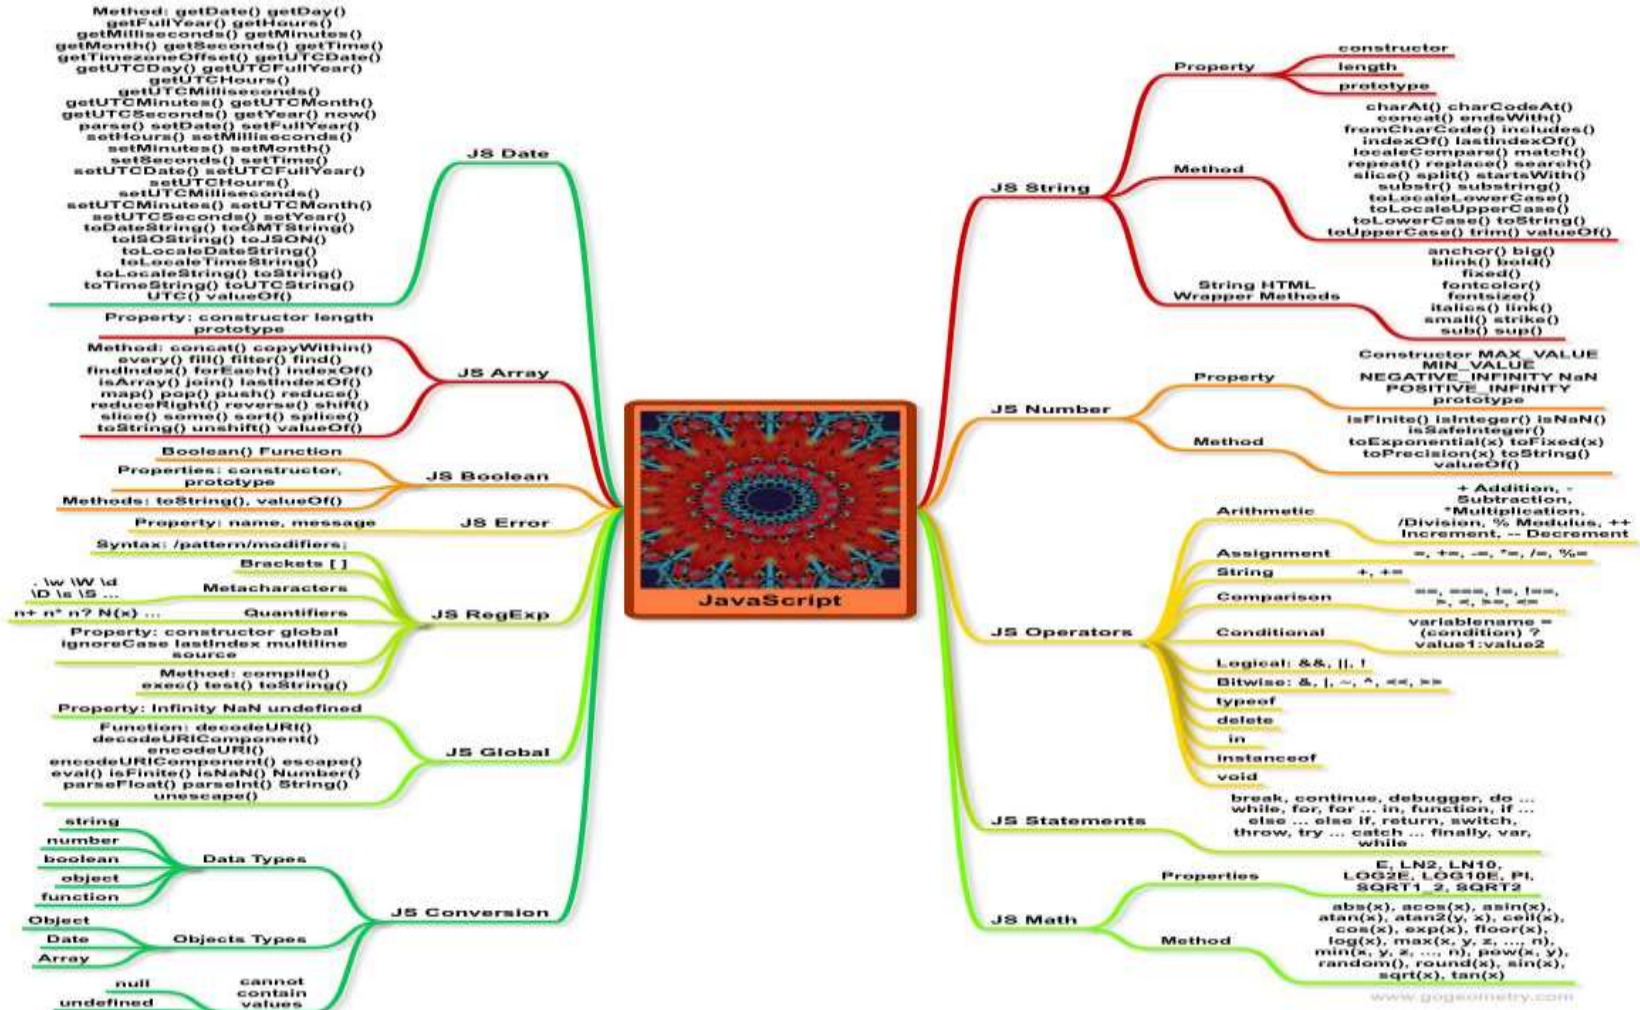

**Course Code and Name : 19TS601 FULL STACK DEVELOPMENT**

**Unit 1 : JAVASCRIPT AND BASICS OF MERN STACK**

**Topic : MERN Components**

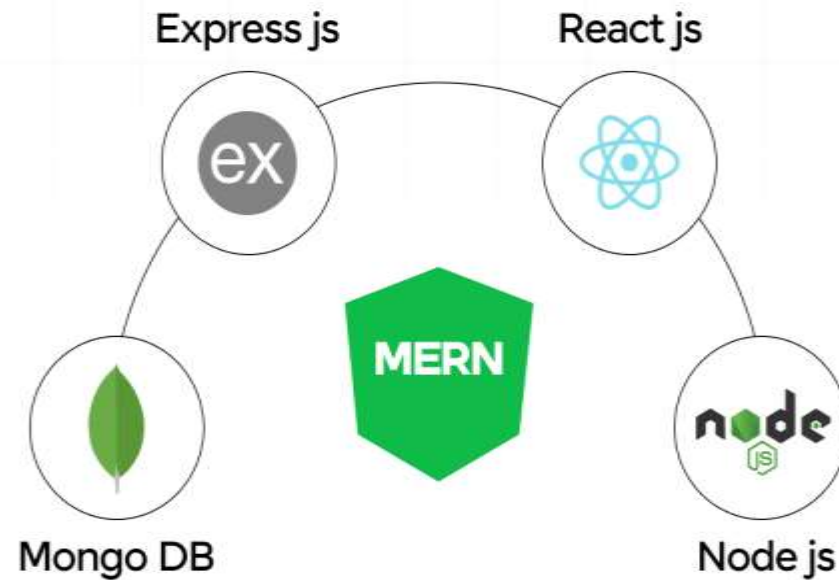

# JavaScript Fundamentals

# What is MERN Stack?

- The MERN stack is a popular and powerful stack of technologies used for building modern web applications. It is an acronym that stands for:

# MERN Components

- **MongoDB:** MongoDB is a NoSQL database that stores data in a flexible, JSON-like format.
- It provides scalability and flexibility, making it suitable for handling large volumes of data and diverse data types.
- MongoDB is often used as the backend database in MERN stack applications.

# Express.js

- **Express.js:** Express.js is a minimal and flexible web application framework for Node.js.
- It provides a robust set of features for building web servers and APIs quickly and easily.
- Express.js simplifies the process of handling HTTP requests, defining routes, and implementing middleware, making it an essential component of the backend in MERN stack applications.

- **React.js**: React.js is a JavaScript library developed by Facebook for building user interfaces.
- It enables developers to create reusable UI components and build single-page applications (SPAs) with a declarative and component-based approach.
- React.js provides efficient rendering and state management capabilities, making it a popular choice for the frontend in MERN stack applications.

# Node.js

- **Node.js:** Node.js is a runtime environment for executing JavaScript code outside the browser.
- It allows developers to build scalable and high-performance server-side applications using JavaScript.
- Node.js is used as the backend runtime in MERN stack applications, enabling server-side logic and interaction with databases like MongoDB.

- By combining MongoDB, Express.js, React.js, and Node.js, the MERN stack provides a full-stack JavaScript solution for developing modern web applications.
- It offers advantages such as code reusability, efficient data handling, and a seamless development experience across the frontend and backend.
- Developers and businesses widely adopt the MERN stack for building robust and scalable web applications.
