

# **SNS COLLEGE OF ENGINEERING**

Kurumbapalayam (Po), Coimbatore – 641 107

**An Autonomous Institution**

Accredited by NBA – AICTE and Accredited by NAAC – UGC with 'A' Grade

Approved by AICTE, New Delhi & Affiliated to Anna University, Chennai

## **DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING**

**COURSE NAME: 19CS622-Blockchain Technology**

**III YEAR /VI SEMESTER**

**Unit 2- CRYPTOCURRENCY**

**Topic 1 : Limitations of Bitcoin**

# Limitations of a bitcoin

# Limitations of a bitcoin - Speed

- The present architecture of the Bitcoin network is capable of processing a maximum of seven transactions per second.
- But, Visa's network can handle a whopping 24,000 transactions per second.
- There's also a speed issue when it comes to how often a new block is created on Bitcoin.

# Limitations of a bitcoin - Privacy

- Bitcoin is only partially anonymous - experts call this pseudo-anonymity.
- Some Bitcoin exchanges also require users to submit identifying information.
- If these databases get hacked, then someone can find out what you've been up to.

# Limitations of a bitcoin - Fees

- Because space in a block is limited, and there are only so many miners on the network, users attach a fee to incentivize miners to include their transaction before others.
- making Bitcoin unsuitable for small transactions

# Limitations of a bitcoin – 51% attack

- If someone or a group acting together controls more than half the computer power being used for mining, they could rewrite the financial history of the blockchain allowing them to double-spend currency.

# Summary

- Several developers, groups and companies have created their own currencies as a direct way of solving some of the Bitcoin's problems.
