Artificial Intelligence & Natural Language Processing

Agent Communication in AI &

NLP

Prepared by, P.Ramya

Assistant Professor/CSE-IoT

SNS College of Engineering

What is Agent Communication?

•Agent Communication refers to how multiple AI agents exchange information, collaborate, and coordinate to complete tasks.

•Used in Multi-Agent Systems (MAS), Distributed AI, and NLP-based Conversational Agents.

Types of Agent Communication

Communication Type	Description	Example
Direct	Agents interact explicitly by	Two chatbots talking to
Communication	sending structured messages.	each other.
T 1• 4	Agents infer information without	Traffic AI adjusting
Indirect Communication	direct messaging (observing changes in the environment).	signals based on vehicle density.
Synchronous	Both agents communicate in real-	
Communication	time.	responding instantly.
Asynchronous Communication	Messages are sent, and responses are processed later .	Email AI auto-responders.

Agent Communication Languages (ACLs)

Agents use **specialized languages** for structured communication:

1.KQML (Knowledge Query and Manipulation Language) – Used for knowledge-based AI communication.

2.FIPA-ACL (Foundation for Intelligent Physical Agents – Agent Communication Language) – Standard language for multi-agent systems.

Multi-Agent Communication in AI & NLP

When multiple agents interact, they **coordinate** to achieve a common goal.

Multi-Agent Communication Scenarios

- •Self-Driving Cars communicating to avoid collisions.
- •AI Trading Systems sharing market data to optimize investments.
- •NLP Chatbots collaborating to improve responses based on previous interactions.

Intelligent agents in AI follow structured architectures to process inputs, learn, and act.

• NLP agents handle text/speech processing, understanding, and response generation.

• Agent communication enables multiple AI systems to interact efficiently using structured messages.
