

SQLite in ios

SQLite can be used in iOS for handling data. It uses sqlite queries, which makes it easier for those who know SQL.

Steps involved

Step 1 – Create a simple **VIEW BASED APPLICATION**.

Step 2 – Select your project file, then select targets and then add **libssqlite3.dylib** library in choose frameworks.

Step 3 – Create a new file by selecting File→ New → File... → select **Objective C class** and click next.

Step 4 – Name the class as **DBManager** with "sub class of" as NSObject.

Step 5 – Select create.

Step 6 – Update **DBManager.h** as follows –

```
#import <Foundation/Foundation.h>#import <sqlite3.h>
@interface DBManager : NSObject {
    NSString *databasePath;}
+(DBManager*)getInstance;-(BOOL)createDB;-(BOOL)
saveData:(NSString*)registerNumber name:(NSString*)name
    department:(NSString*)department year:(NSString*)year;-(NSArray*)
findByRegisterNumber:(NSString*)registerNumber;
@end
```

Step 7 – Update **DBManager.m** as follows –

```
#import "DBManager.h"static DBManager *sharedInstance = nil;static sqlite3 *
*database = nil;static sqlite3_stmt *statement = nil;
@implementation DBManager
+(DBManager*)getInstance {
```

```

if (!sharedInstance) {
    sharedInstance = [[super allocWithZone:NULL] init];
    [sharedInstance createDB];
}

return sharedInstance;
}

-(BOOL)createDB {
    NSString *docsDir;
    NSArray *dirPaths;

    // Get the documents directory
    dirPaths = NSSearchPathForDirectoriesInDomains
    (NSDocumentDirectory, NSUserDomainMask, YES);
    docsDir = dirPaths[0];

    // Build the path to the database file
    databasePath = [[NSString alloc] initWithString:
    [docsDir stringByAppendingPathComponent: @"student.db"]];
    BOOL isSuccess = YES;
    NSFileManager *filemgr = [NSFileManager defaultManager];

    if ([filemgr fileExistsAtPath: databasePath ] == NO) {
        const char *dbpath = [databasePath UTF8String];
        if (sqlite3_open(dbpath, &database) == SQLITE_OK) {
            char *errMsg;
            const char *sql_stmt =
                "create table if not exists studentsDetail (regno integer
                primary key, name text, department text, year text)";

            if (sqlite3_exec(database, sql_stmt, NULL, NULL, &errMsg) != SQLITE_OK)
            {
                isSuccess = NO;
                NSLog(@"%@", errMsg);
            }
        }
    }
}

```

```

    sqlite3_close(database);
    return isSuccess;
} else {
    isSuccess = NO;
    NSLog(@"Failed to open/create database");
}
}

return isSuccess;
}

-(BOOL) saveData:(NSString*)registerNumber name:(NSString*)name
department:(NSString*)department year:(NSString*)year {
const char *dbpath = [databasePath UTF8String];

if (sqlite3_open(dbpath, &database) == SQLITE_OK) {
    NSString *insertSQL = [NSString stringWithFormat:@"insert into
studentsDetail (regno,name, department, year) values
(%d, \"%@\", \"%@\", \"%@\")",[registerNumber integerValue],
name, department, year];
    const char *insert_stmt = [insertSQL UTF8String];
    sqlite3_prepare_v2(database, insert_stmt,-1, &statement, NULL);

    if (sqlite3_step(statement) == SQLITE_DONE) {
        return YES;
    } else {
        return NO;
    }
    sqlite3_reset(statement);
}

return NO;
}

-(NSArray*) findByRegisterNumber:(NSString*)registerNumber {
const char *dbpath = [databasePath UTF8String];

if (sqlite3_open(dbpath, &database) == SQLITE_OK) {

```

```

NSString *querySQL = [NSString stringWithFormat:
    @"select name, department, year from studentsDetail where
    regno=%@\"",registerNumber];
const char *query_stmt = [querySQL UTF8String];
NSMutableArray *resultArray = [[NSMutableArray alloc] init];

if (sqlite3_prepare_v2(database, query_stmt, -1, &statement, NULL) == SQLITE_OK) {
    if (sqlite3_step(statement) == SQLITE_ROW) {
        NSString *name = [[NSString alloc] initWithUTF8String:
            (const char *) sqlite3_column_text(statement, 0)];
        [resultArray addObject:name];

        NSString *department = [[NSString alloc] initWithUTF8String:
            (const char *) sqlite3_column_text(statement, 1)];
        [resultArray addObject:department];

        NSString *year = [[NSString alloc] initWithUTF8String:
            (const char *) sqlite3_column_text(statement, 2)];
        [resultArray addObject:year];
        return resultArray;
    } else {
        NSLog(@"Not found");
        return nil;
    }
    sqlite3_reset(statement);
}
}

return nil;
}

```

Step 8 – Update **ViewController.xib** file as follows –

Step 9 – Create IBOutlets for the above text fields.

Step 10 – Create IBAction for the above buttons.

Step 11 – Update **ViewController.h** as follows –

```
#import <UIKit/UIKit.h>#import "DBManager.h"

@interface ViewController : UIViewController<UITextFieldDelegate> {

    IBOutlet UITextField *regNoTextField;
    IBOutlet UITextField *nameTextField;
    IBOutlet UITextField *departmentTextField;
    IBOutlet UITextField *yearTextField;
    IBOutlet UITextField *findByRegisterNumberTextField;
    IBOutlet UIScrollView *myScrollView;

-(IBAction)saveData:(id)sender;-(IBAction)findData:(id)sender;@end
```

Step 12 – Update **ViewController.m** as follows –

```
#import "ViewController.h"

@interface ViewController ()@end

@implementation ViewController

- (id)initWithNibName:(NSString *)nibNameOrNil bundle:(NSBundle *)
nibBundleOrNil {
    self = [super initWithNibName:nibNameOrNil bundle:nibBundleOrNil];
    if (self) {
        // Custom initialization
    }
    return self;
}

- (void)viewDidLoad {
    [super viewDidLoad];
    // Do any additional setup after loading the view from its nib.
}

- (void)didReceiveMemoryWarning {
    [super didReceiveMemoryWarning];
    // Dispose of any resources that can be recreated.
}

-(IBAction)saveData:(id)sender {
```

```

BOOL success = NO;
NSString *alertString = @"Data Insertion failed";

if (regNoTextField.text.length>0 && nameTextField.text.length>0 &&
    departmentTextField.text.length>0 && yearTextField.text.length>0 ) {
    success = [[DBManager getInstance]saveData:
    regNoTextField.text name:nameTextField.text department:
    departmentTextField.text year:yearTextField.text];
} else {
    alertString = @"Enter all fields";
}

if (success == NO) {
    UIAlertView *alert = [[UIAlertView alloc] initWithTitle:
    alertString message:nil
    delegate:nil cancelButtonTitle:@"OK" otherButtonTitles:nil];
    [alert show];
}

-(IBAction)findData:(id)sender {
    NSArray *data = [[DBManager getInstance]findByRegisterNumber:
    findByRegisterNumberTextField.text];

    if (data == nil) {
        UIAlertView *alert = [[UIAlertView alloc] initWithTitle:
        @"Data not found" message:nil delegate:nil cancelButtonTitle:
        @"OK" otherButtonTitles:nil];
        [alert show];
        regNoTextField.text = @"";
        nameTextField.text = @"";
        departmentTextField.text = @"";
        yearTextField.text = @"";
    } else {
}

```

```
regNoTextField.text = [data objectAtIndex:0];
nameTextField.text = [data objectAtIndex:1];
departmentTextField.text = [data objectAtIndex:2];
yearTextField.text = [data objectAtIndex:3];
}

#pragma mark - Text field delegate
-(void)textFieldDidBeginEditing:(UITextField *)textField {
[myScrollView setFrame:CGRectMake(10, 50, 300, 200)];
[myScrollView setContentSize:CGSizeMake(300, 350)];}

-(void)textFieldDidEndEditing:(UITextField *)textField {
[myScrollView setFrame:CGRectMake(10, 50, 300, 350)];}

-(BOOL)textFieldShouldReturn:(UITextField *)textField {
[textField resignFirstResponder];
return YES;}@end
```
